- Results

# SLOVAKIAN FOREST INDUSTRY

- after the year 2000 wood processing capacity in Slovakia increased significantly
- improved domestic wood consumption
- in 2008 - supplied 8.8 million m<sup>3</sup> of timber
  - 2.2 mil. m<sup>3</sup> was exported
- wood processing industry consumed - 8 mil. m<sup>3</sup> of timber
- coniferous sawnwood production was over 2 mil. m<sup>3</sup>

# METHODOLOGY - STEP 1

The indicators were calculated as annual values for the period  
1998-2008  
( into the three sub-periods lasting 3-4 years each )

Based on these definitions the main groups in the forest industry can be selected.

- coniferous industrial roundwood – IRWD (C),
- non- coniferous industrial roundwood – IRWD (NC),
- coniferous sawnwood – SNWD (C),
- non-coniferous sawnwood – SNWD (NC).

# METHODOLOGY - STEP 2

To measure the competitiveness of the selected clusters the following indicators were used :

- Value of total export of a product group (*expval*)
- Value of total import of a product group (*impval*)
- The share of export volume in relation to domestic production (*exp/prod*)
- The share of import volume in relation to domestic consumption (*imp/cons*)

# RESULTS -Calculated indicators of competitiveness for industrial roundwood clusters

Cluster	Indicator	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008

# CONCLUSION

- industrial roundwood and sawnwood, both including coniferous and non-coniferous products are the main product clusters analysed in this paper coniferous industrial roundwood cluster the indicator of outward orientation
- they are significant similarities in evalution of competitivness
- coniferous sawnwood is the one showing the highest degree of outward competitiveness
- all analyzed clusters have a comparative advantage and indicate openness toward export markets

# Thank you for your attention!
